329.

Patented bit retention system offers full support of bit shank within the chuck during drilling operations to greatly reduce possibility of shanking.

Bit design eliminates the need for costly bit shrouds reducing the overall cost of drill bits.

Innovative design of the sample tubes provides excellent wear resistance and better than average life.

Efficient air flow design allows the hammer to drill against large volumes of water.

Overall design gives drilling contractors a hammer that performs at the highest level in all aspects of RC drilling.
